

University Of Engineering and Technology, Lahore
Computer Engineering Department

Course Name: Programming Fundamentals and Data Structures	Course Code: CMPE-112L
Assignment Type: Lab Report	Dated: 23rd April, 2026
Semester: 1st	Session: 2026
Lab/Project/Assignment #: 11	CLOs to be covered: CLO4
Lab Title: Exception Handling	Teacher Name: Hafiz Muhammad Mubashar

Lab Evaluation:

CLO4	Apply appropriate programming techniques to create executable programs to solve well defined problems					
	Level1	Level2	Level3	Level4	Level5	Level6
(5)						
Total						/5

Rubrics for Current Lab Evaluation

Scale	Mark s	Level	Rubric
Excellent	5	L1	Submitted all lab tasks, BONUS task, have good understanding.
Very Good	4	L2	Submitted the lab tasks but have good understanding
Good	3	L3	Submitted the lab tasks but have weak understanding.
Basic	2	L4	Submitted the lab tasks but have no understanding.
Barely Acceptable	1	L5	Submitted only one lab task.
Not Acceptable	0	L6	Did not attempt

LAB No 11: Exception Handling

Lab Goals/Objectives:

To understand how to use try/except blocks in Python to catch and handle runtime errors gracefully, including catching specific exceptions.

Equipment Required:

Python 3, VS Code / PyCharm

Theory:

Exception handling in Python is done using try/except blocks. Code that might raise an error is placed inside the try block, and the except block defines how to respond if an error occurs, preventing the program from crashing.

Lab Work:**Task 1: Try/Except Basic**

```
def hello():  
    try:  
        a = input("Enter your name here:")  
        print(f'Hello {a}!')  
        print("Hello World!")  
    except:  
        print("Invalid input")  
print(hello())
```

Result:

```
Enter your name here:Anaya  
Hello Anaya!  
Hello World!  
None
```

Task 2: Try/Except with Exception Object

```
def hello():  
    try:  
        a = input("Enter your name here:")  
        print(f'Hello {a}!')  
        print("Hello World!")  
    except Exception as e:  
        print("Error")  
print(hello())
```

Result:

```
Enter your name here: anaya  
Hello anaya!  
Hello World!  
None
```

Conclusions:

Exception handling using try/except was practiced, including catching a generic exception and catching a specific Exception object.
